

## Gold Diamond Grade "A" Western Red Cedar Mulch

Grade "A" Western Red Cedar mulch is a premium-grade landscaping material known for its rich, vibrant brownish-red color and uniform texture. Popular among homeowners and professional landscapers, it combines striking aesthetic appeal with exceptional performance and sustainability, making it an excellent choice for gardens, flower beds, pathways, and landscaped areas.

This high-quality mulch offers superior durability and longevity, with a dense fibrous structure that resists decomposition, reducing the need for frequent replacement. It enhances landscape health by retaining soil moisture, regulating temperature extremes, and enriching the soil over time. Naturally pest-resistant and sourced sustainably, Grade "A" Western Red Cedar mulch provides a low-maintenance, eco-friendly solution that elevates any outdoor space.

### Key Features

- ✓ **Aesthetic Appeal:** The vibrant brownish-red color and uniform texture elevate the beauty of any garden, flower bed, or pathway, enhancing overall landscape design.
- ✓ **Durability & Longevity:** Naturally resistant to decomposition due to its dense fibrous structure, this mulch breaks down slower than other organic options, ensuring long-lasting protection and coverage. Occasionally turning over the mulch refreshes its vibrant color.
- ✓ **Moisture Retention:** Its unique matting ability prevents evaporation and retains soil moisture, providing plants with a consistent water supply—ideal for drought-prone or hot climates. It is also less prone to floating compared to other mulches.
- ✓ **Soil Insulation:** Acts as a natural barrier, stabilizing soil temperatures in both hot and cold weather, promoting healthier root systems and overall plant growth.
- ✓ **Soil Enrichment:** Gradual decomposition enriches the soil with organic matter, improving its structure and nutrient content over time.
- ✓ **Pest Resistance:** Naturally occurring compounds like thujone deter insects such as termites and ants, helping to protect your landscape without the need for chemicals.
- ✓ **Environmentally Friendly:** Manufactured from sustainably sourced, reforested Western Red Cedar, this mulch is eco-friendly, chemical-free, and dye-free, supporting responsible landscaping practices.

### Sustainable Forest Initiative (SFI)

Grade "A" Western Red Cedar mulch is produced from raw materials harvested under the Sustainable Forestry Initiative (SFI), ensuring adherence to responsible forest management practices. This includes biodiversity conservation, sustainable harvesting, and reforestation efforts. All raw materials are sourced from partners who prioritize reforestation and sustainability, protecting Western Red Cedar forests for future generations.

### Specifications

- Type:** Grade "A" Mulch, 100% All Bark
- Brand:** Gold Diamond
- Size:** 3.0 CF, 60 bags/pallet
- Moisture:** Excellent Retention
- Appearance:** Brownish-Red
- Use:** Highlight Areas, Weed Barrier
- Enhancement:** Organic
- Sustainability:** Eco-Friendly
