Sierra's Choice Grade "A" Redwood Mulch

Sierra's Choice Redwood Mulch is a premium-grade landscaping material crafted from the bark and wood of the Redwood tree (*Sequoia sempervirens*), a species native to the coastal regions of Northern California. Known for its deep reddish-brown color and natural durability, this mulch is a popular choice among homeowners and professional landscapers alike. Its ability to enhance the beauty of outdoor spaces while providing practical benefits makes it an excellent solution for gardens, walkways, and larger landscaped areas.

With its dense fibrous structure, Sierra's Choice Redwood Mulch resists decomposition and pests, offering long-lasting coverage and protection for plants. The mulch's matting ability helps conserve soil moisture, regulate soil temperatures, and suppress weed growth, reducing maintenance and supporting healthy landscapes. Sustainably sourced and free of chemicals or dyes, this mulch is also an eco-friendly option for environmentally conscious landscapers.

Key Features

- ✓ **Aesthetic Appeal:** The rich, reddish-brown color adds warmth and a natural, elegant aesthetic to garden beds, walkways, and landscaped areas.
- ✓ **Durability & Longevity:** Naturally resistant to decomposition and pests, this mulch breaks down slower than other organic varieties, providing extended use with minimal maintenance. Occasionally turning the mulch refreshes its vibrant color.
- ✓ **Moisture Retention:** The fibrous structure prevents evaporation, retaining soil moisture to ensure plants receive consistent hydration, even in hot and dry climates. Additionally, it resists floating during heavy rain.
- ✓ **Soil Insulation:** Acts as a natural insulating layer, maintaining stable soil temperatures in extreme weather conditions, which benefits root systems and overall plant health.
- ✓ **Soil Enrichment:** Gradual decomposition improves soil structure and fertility by adding organic matter over time.
- ✓ **Pest Resistance:** Natural oils in Redwood mulch help deter insects like termites and ants, protecting your landscape.
- ✓ **Environmentally Friendly:** Manufactured from sustainably sourced, repurposed byproducts of the redwood forestry industry, this mulch supports responsible landscaping and avoids chemicals or dyes.

Sustainable Forest Initiative (SFI)

Sierra's Choice Redwood Mulch is harvested under the Sustainable Forestry Initiative (SFI), which ensures environmentally responsible forestry practices. By adhering to these standards, the production process supports biodiversity, wildlife habitat conservation, and sustainable harvesting. All raw materials are sourced from partners committed to reforestation and sustainability, ensuring the long-term health of Redwood forests. Reforestation and natural regeneration efforts allow you to make an eco-friendly choice that contributes to the preservation of these iconic ecosystems.

Specifications

Type: Grade "A" Mulch, 100% All Bark

Brand: Sierra's Choice

Size: 3.0 CF, 60 bags/pallet

Moisture: High Retention

Appearance: Deep Red-Brown

Use: Beds, Paths, Weed Barrier

Enhancement: Organic

Sustainability: Eco-Friendly
